## Do Hero support SIP Trunking?

Hero SIP Trunking is available on all of our plans and we offer DDIs for just \$2+VAT per month and these come with their own channel. DDI numbers do not come with any Cloud Features but simply route to your existing PBX or switch.

Here are some great reasons why Hero SIP Trunking is the best option for your IP PBX PSTN connectivity. Customers have two options when connecting their IP capable PBX to Hero - SIP Peering and Registered Trunks. Both services are available on ALL Hero accounts and can be configured in our portal. Simply make the choice that best suits your business requirements.
